TRIPLE GREEN

(UNI-REM 800 MODIFIED)

● What is TRIPLE GREEN?

Triple Green is a new generation of Industrial Cleaning Agents. It combines emulsifying and cleaning action of UNI-REM 800 with a strength of bioterpines and hydrocarbon-oxidizing enzymes. Is there a proven green alternative to harsh chemical industrial cleaning agents? Yes! It is the world "greenest," bio-alternative to harsh chemical cleaning agents, to help break down different types of hydrocarbon molecules. The non-toxic product can be used by itself or with UNI-REM 200 (Hydrocarbon Decomposing Bacteria) to naturally turn large hydrocarbon molecules into harmless fatty acids.

● How does TRIPLE GREEN work?

TRIPLE GREEN (UNI-REM 800 modified) has extremely high oxidation potential or the ability to oxidize and then split large hydrocarbon molecules into simpler pieces, then decomposing bacteria in the water or soil quickly turn those simpler chemicals into harmless fatty acids that are actually good for the environment.

● How is TRIPLE GREEN used?

Triple Green (UNI-REM 800 modified) normally is used by itself, due to high oxidation potential. UNI-REM 800 modified is also very active to unclog oil wells and treat wastewater contaminated with oil. It is the most natural solution to cleaning the environment after an oil spill.

● Directions for Use

TRIPLE GREEN (UNI-REM 800 modified) is effective whenever oil has polluted the environment. It can be used alone, or with UNI-REM 200 hydrocarbon decomposing bacteria. Please contact your UNIREM Technologies representative for technical usage information.

● UNIREM Products

UNI-REM products and environmental solutions are safe, effective and provide the greenest answers to situations when oil has polluted water or soil. UNI-REM 800 restores the environment by breaking down oil molecules and then allowing bacteria to turn the simpler compounds into harmless fatty acids.
