UNI-REM – ISS 2500

(Ionic Soil Stabilizer)

● What is UNI-REM – ISS 2500 Ionic Soil Stabilizer?

Do dirt roads and parking lots always have to be filled with potholes and have washboard surfaces? No! UNI-REM ISS 2500 Ionic Soil Stabilizer is an environmentally safe product that turns unstable soils into wear resistant stable surfaces able to withstand heavy traffic and the harshest weather conditions. It is easy to apply, long lasting and is no threat to the ground water.

● What is the UNI-REM – ISS 2500 Ionic Soil Stabilization Process?

ISS 2500 Ionic Soil Stabilizer is the permanent solution to stabilizing soil. Whether used in the pre-construction phase of building projects or as a replacement for asphalt in rural areas, using ISS 2500 provides a cost effective solution to any project. When applied its organic salts create long-lasting bonds between the soil particles. The bonding forces out free water and once compacted, this amazing product is unaffected by free and thaw cycles, heavy rainfall or the heaviest loads. UNI-REM – ISS 2500 Ionic Soil roads can be easily contoured for drainage. It is environmentally safe and the greenest solution to soil stabilization.

● How is UNI-REM – ISS 2500 Ionic Soil Stabilizer Applied?

First the soil is ripped to a depth of approximately 6," then UNI-REM – ISS 2500 Ionic Soil Stabilizer is mixed with water and then applied to the soil. After soil and stabilizer are mixed, the road is then contoured and compacted. The stable surface poses no threat to groundwater.

● UNI-REM – ISS 2500 Ionic Soil Stabilizer

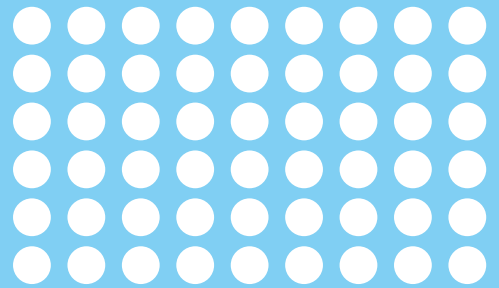

UNI-REM – ISS 2500 Ionic Soil Stabilizer provides the greenest, safest and most cost effective way to improve soil roads, parking lots, runways and trails.

● UNI-REM – ISS 2500 Ionic Soil Stabilizer – Facts

- UNI-REM – ISS 2500 Ionic Soil Stabilizer is a mixture of organic minerals and buffered acids.
- The Soil Stabilizer reacts with the water in the surface of the soil to get maximum compactness.
- As long as water is periodically applied to the surface, the soil is stabilized and stays compact.
- The surface is dust-free, washboard-free and can handle heavy loads.
